Dears Friends and Colleagues,

Belgrado welcomes you to the EAU 10th South Eastern European Meeting (SEEM).

This meeting marked the third time the annual SEEM is held in Serbia and we are proud to note that this event has steadily attracted, for the last ten years, the interest of many of our colleagues not only from South Eastern Europe but also from elsewhere.

With the support of local organisers, the SEEM continues the tradition of boosting its ties with both young and veteran urologists. For this year we have prepared a scientific programme that covers current and salient issues in urology. And with the cooperation of the European School of Urology (ESU), the EAU Section of Uro-Technology (ESUT) and other partners, participants in this two-day meeting can look forward to insightful discussions, debates, lectures, country contests and hands-on training in laparoscopy and robotics.

Your attendance here reflects the dynamic work being done in the region and affirms our hopes that this annual meeting will continue to link up not only urological professionals from within South Eastern Europe but also with their overseas colleagues. Progress in medical science is achieved via collaborative networks and we certainly look forward to advances in urology with contributions from this region.

To all participants, welcome to Serbia and have a productive meeting!

Prof. Bob Djavan
Chairman of the EAU Regional Office

Dear Colleagues, Dear Friends,

We are very happy that for the third time Belgrade hosts urologists for the EAU 10th SEEM meeting. Welcome to our city.

We hope that this will be the opportunity for all of us to exchange knowledge as well as professional skills. To show that we, as a region, keep pace with the best of European and global urology. But also, in what way we can progress for the benefit of our patients. We sincerely hope that for the next few days you will enjoy the hospitality of Belgrade as well as Serbian urologists.

**Aims and objectives**

Laparoscopic procedures are continuously evolving in urology based on the increasing expertise of urologic surgeons. This includes ablative procedures, such as radical nephrectomy as well as reconstructive techniques, such as pyeloplasty. Since the number of centres with laparoscopic expertise is still limited in Europe, laparoscopic training programmes have become very important. Hands-on training courses at the pelvi-trainer represent one of the main steps of basic laparoscopic training. ESU/ESUT training research board has development and validated a comprehensive program of education and assessment of the basic fundamentals of laparoscopic surgery namely E-BLUS. Finally, all remaining questions can be answered and discussed with all tutors including the demonstration of tips and tricks.

You can register at the EAU registration desk.

**Aims and objectives**
The EAU Section of Uro-Technology (ESUT) and the EAU Section of Urolithiasis (EULIS) offer an intensive hands-on training course with different models focusing on the endoscopic management of urolithiasis. The delegates will be taken through a sequential programme of Ureterorenoscopy using normal endoscopic instruments in different models. The use of various guide-wires, baskets and intracorporeal lithotripters will be demonstrated. The ESUT and the EULIS faculty consist of experienced surgeons in the field of Ureterorenoscopy. A video demonstrating the different steps and tasks of the procedures will be presented and afterwards the delegates will be instructed according to their level of experience in small teams at the models.
